Description :	Tag#	Date:	Post Weight	Material Type	Recovery Vessel
Gold Brooch	00240	10-16-2013	27.9 Grams	Gold	Blue Water Rose

Artifact Comments: Artifact recovered from the Contadora section of the San Jose site. The detailed Baroque style Gold Brooch was in relatively good condition with only slight damage to the setting where it would have presumably held some type of stone, natural pearl or gemstone. The brooch had light gorgonian concretion deposits and was found in an area with other assorted jewelry items, all in relatively the same state and condition. The area is approximately 68.5 Meters in length with a basic heading of 34 degrees, Depth at low tide is under 4.5 Meters and is heavily affected by wave action. The highly dynamic environment and rocky bottom conditions may possibly have been a factor of the artifacts damaged condition upon recovery.
